

SHAPING THE FUTURE TOGETHER

- Claire Byast shares her story

THE BACKGROUND

Claire started at Magnox six years ago after working previously at the University of Bangor. Since joining, she has taken the opportunity to work in a variety of roles before settling upon her current job as a Technical Clerk in the Reactor Physics department, which she started in 2010.

When news came about the changes, Claire saw it as the ideal opportunity to think proactively about the next steps in her career journey.

THE APPROACH

“I have always thought seriously about my career, which is why I’ve tried a variety of different roles and departments whilst being at Magnox” Claire confirms. For her, Shaping the Future has one clear advantage.

“Having access to support at your workplace is how Shaping the Future has really helped me” she says. *“The Strengthscope questionnaire validated how I saw ‘Me’ but the Coaching support has been invaluable in making me think “What do I want to do now?”*

And for Claire, that means further study. An Open University course will – she hopes – grow her academic knowledge as well as opening up potential future career paths.

THE FUTURE

Claire hopes that by completing her Open University course, Level 1, Introduction to Business Studies that it will help her decide what her future career might be after

Magnox. The course is a perfect introduction to business and it affords Claire the opportunity to look at other disciplines such as Human Resources, Finance, Management, Marketing and Accounting.

“Regardless of what I decide to do, Shaping the Future has given me scope to think. The fact that it is on site is a huge advantage and one I genuinely value. And of course, the financial help is really appreciated, too.”

“Shaping the Future has made me think...

and become more focused about my future.”
